Christian Tomas Ocampo

San Jose, CA | chris0112tomas@gmail.com | LinkedIn

EDUCATION

University of California, Berkeley **Berkeley, CA**
Bachelor of Arts in Computer Science *Expected May 2029*

- Codebase Developer, MLT Fellow, ColorStack Member, HSF Scholar

Relevant Coursework: Algorithms, Data Structures, Computer Architecture, Discrete Mathematics & Probability, Linear Algebra, Principles of Data Science

WORK EXPERIENCE

Google | Sponsored Contract Project **Berkeley, CA**
Software Engineer *September 2026 - Present*

- Developing a persistent memory system for AI agents using Python, Google AlloyDB, Gemini, and Valkey to preserve context across sessions without replaying full conversation histories.
- Building an asynchronous fact-extraction pipeline with session-scoped caching and persistent storage to separate memory processing from agent response generation.
- Designing hybrid vector/full-text retrieval and evidence-grounded reflection workflows, alongside benchmark methodologies to evaluate recall accuracy, latency, and token efficiency.

Legali AI **Berkeley, CA**
Software Engineering Intern *May - August 2026*

- Engineered a bar-compliant attorney marketplace using Node.js, Express, PostgreSQL, and Stripe, designing relational data models, search infrastructure, and automated billing with 90+ tests.
- Resolved a billing race condition using database transactions and row-level locking while shipping a 6-month attorney free trial with card-on-file.
- Built automated AI content and compliance safeguards for sensitive content and scaled a Cloudflare Workers service for a 1,000-user pilot using Durable Objects for rate limiting and KV caching.

Next for Autism **Berkeley, CA**
Software Developer *February - May 2026*

- Built a full-stack mentorship platform with React, Next.js, and Supabase that replaced manual workflows and supported 100+ users across a 16-week program.
- Developed role-based dashboards for admins, mentors, and mentees, plus mentor-mentee matching and automated email workflows, saving program staff 3-5 hours per week.

Boys & Girls Clubs of Silicon Valley **San Jose, CA**
Code + Create STEM Program Specialist *June - July 2025*

- Led daily STEM workshops for 15-20 students using LEGO robotics, animation, and digital storytelling, with students presenting robotics and digital art projects in a showcase.
- Designed and taught an original Swift Playgrounds lesson introducing programming fundamentals through hands-on exercises and a final coding project.

PROJECTS

World Cup Oracle | Python *July 2026*

- Built and deployed a voice AI soccer prediction web app combining real-time speech, LLM-generated commentary, and a logistic regression model trained on ~49K international matches.
- Architected an LLM commentary pipeline using FastAPI/SSE, Deepgram speech-to-text/TTS, and live fixture data, grounding generated statistics to prediction model outputs.

Neural Network Image Classifier | RISC-V Assembly *July 2026*

- Built an image classifier in RISC-V assembly by implementing matrix multiplication, ReLU, argmax, file I/O, and manual memory management for end-to-end neural network inference.

SKILLS

Languages: Java, Python, JavaScript, C, SQL, RISC-V
Frameworks & Libraries: React, Next.js, Node.js, Express, FastAPI
Tools & Platforms: Google Cloud (AlloyDB), Valkey, PostgreSQL, Docker, Cloudflare Workers, Git/GitHub, Supabase
